

# Frontiers in Laboratory Medicine 2012

The essential meeting for senior laboratory professionals

## **FILM 2011 delegates commented:**

"Excellent event, accomplished speakers who challenged my thinking ... returning home armed with tools to improve the service we offer."

"Entertaining speakers gave a very good exposition of the current position in the rapidly changing field of pathology service provision."

"Many speakers challenged the current and traditional processes in pathology ... nice to know there are others who believe things need to change."

"FILM's big asset is being able to be very topical, bang up to date, with authoritative speakers giving realistic views not just doctrine of the day."

"Informative and thought provoking, particularly Primary Care Commissioning from the viewpoint of the GP. Good opportunity for networking and sharing experiences."

"A must attend, in my view, for all from the family of professionals comprising pathology."

"A great meeting. Given the major changes being forced on pathology, it helps give tools for change and ways of remaining competitive, to provide high quality services yet achieving cost savings in what is to become a very different service to the one we have known until now."

"Being in the presence of so many innovative thinkers and doers within pathology. Meeting pathologists who get out there – inspirational."
