The Chief Scientific Officer’s Knowledge Transfer Partnership Programme for Leaders in Healthcare Science

Be at the forefront of making scientific innovation an intrinsic part of delivering a world class NHS

The CSO’s Knowledge Transfer Partnership Programme offers a unique opportunity for healthcare scientists to build long term partnerships between clinical, research and industry teams at leading centres of excellence in science and technology through collaboration at a senior level with partner organisations across the UK’s National Measurement System (NMS) and the United Kingdom Accreditation Service (UKAS).

Now taking applications for 2018

The twelve month programme is designed to enable senior healthcare scientists to remain in clinical service whilst exchanging skills and expertise with NMS scientists to create, expand, test or implement innovative ideas to improve patient care.

Up to twelve successful applicants will be selected based on their track record of effective leadership and demonstrable research or quality improvement expertise. Key to this will be applicants proposed area of scientific engagement and how this fits with areas of mutual interest between the NHS and the partner organisations. In addition, the judging panel will be seeking evidence of a strong commitment to using this opportunity as a platform for longer term and larger scale collaborations that go beyond the twelve-month programme.

What will the programme consist of?

The programme offers the opportunity to:

• Collaborate at a senior level with partner organisations that collectively deliver the UK’s National Measurement System (NMS); The National Physical Laboratory (NPL), LGC-UK National Measurement Laboratory (NML), National Institute for Biological Standards and Control (NIBSC) and The United Kingdom Accreditation Service (UKAS).

• Build long term scientific collaborations between clinical, research and industry teams to successfully address health challenges and speed up the identification and dissemination of healthcare innovations.

• Advise at a national level through membership on the Office of the Chief Scientific Officer’s NHS England senior advisory group.

• Input into the UK’s National Measurement System research programmes to help ensure they provide benefit to the NHS and address key clinical challenges.

• Enhance your leadership skills through individual King’s Fund executive coaching sessions and join other senior leaders and CEO’s at high profile leadership events.

• Critically explore and expand your research idea through a twelve month programme of outcomes focussed master classes, action learning sets and mastermind sessions with topic experts and improvement colleagues at The King’s Fund.

• Professional speaking and ambassadorial opportunities and attendance at the National Chief Scientific Officer’s Conference 2019.

The selection process will include an application form and an interview.

15 April 2018 – closing date for applications
8 & 9 May – interviews take place in London
June 2018 – programme commences
